

Back End

Flask==2.2.2

Flask-SQLAlchemy==2.5.1

Flask-CORS==3.0.10

SQLAlchemy==1.4.39

pytest==7.1.2

python -m venv venv # Create a virtual environment

source venv/bin/activate # Activate on macOS/Linux

or

venv\Scripts\activate # Activate on Windows

pip install Flask Flask-SQLAlchemy Flask-CORS SQLAlchemy pytest

Run Application:

python app.py

Run Test Cases:

Pytest

To Run python app.py should be running in the background After running this reboot the backend by running python app.py because it clears the DB by testing delete all users

Frontend

Download Node.js:

- Go to the [Node.js website](https://nodejs.org/).
- Download the LTS version for your operating system.

npm install axios react-router-dom

Then build and run npm start
